Project Plan Apothecary Jars

For this project you will need:

- a wood craft circle
- wooden candlestick
- glass jar
- wood finial
- Gorilla® Epoxy

You can find all of these at your local craft or hardware store.

- 1 Mix Gorilla Epoxy according to directions and add to the center of the wooden candlestick.

- 3 Add some epoxy to the bottom of the wood finial.

- 5 Paint both the candlestick and the lid with finial using your favorite spray paint. Once dry, add some epoxy to the top of your candlestick.

- 2 Attach the candlestick to the center of the wooden craft circle. Clamp with heavy object or tape. Let it dry for at least 90 minutes.

- 4 Attach the wood finial to the lid of the jar. Again, clamp and let it dry for at least 90 minutes.

- 6 Place jar on top of the candlestick, clamp, and let it dry. Screw the lid back on and you are set. (I wrapped my lid using some jute twine to add a little something extra. You can personalize yours however you like. These make great gifts, storage and decor!)
